

Govt.nz Digital Identity Ecosystem Sandbox

Registration Form

The Government Digital Identity Sandbox Ecosystem provides a controlled, non-production space for organisations and agencies to explore, test, and validate digital identity solutions. This form requests access to Sandbox versions of the Govt.nz Wallet, NZ Verify, Trust Framework Register VICAL, and Issuance Platform (if required).

Access is subject to this form being complete and the Sandbox Participation Terms of Use set out in this document. By completing this form and acknowledging acceptance, you agree that your organisation, and any third-party providers acting on behalf of your organisation, will comply with those Terms as a condition of participation.

Return this signed completed form and card artwork to **governmentapp@gdda.govt.nz**

Organisation information

Required fields *

Details	Response
Organisation name* This is the organisation that provides the credential. List any third-party suppliers further below.	
Describe your use case* Provide details on what you are using the Sandbox for.	
Other organisations List any suppliers that will access Sandbox for development and testing.	
Contacts	
Business Owner <i>This person will sign the Acceptance Statement. It is up to the organisation to determine who has appropriate authority to do this, it may typically be at General Manager or equivalent level.</i>	
Name*	
Position*	
Email*	
Key Contact <i>This person will be responsible for day-to-day correspondence with the Sandbox provider during the development and testing process. This may be a Project Manager, a Product Owner, or other roles in the organisation involved in providing the credential.</i>	
Name*	
Position*	
Email*	

Technical Lead				
<i>This is the primary person who will engage with the Sandbox provider for technical matters during development and testing. They may be from a 3rd party vendor.</i>				
Name*				
Organisation				
Position*				
Email*				
Credential Issuance				
Will you be using the All of Government Issuance Platform? *		☐ Yes <i>(If Yes, please fill in this section, If no move to App Access)</i> ☐ No		
Do you require SSO integration?		☐ Yes ☐ No		
Issuance Sandbox Admins Must be two unique emails		Email 1: Email 2:		
App Access List users that will require sandbox access to the Govt.nz app wallet and/or NZ Verify. Additional future users can be requested via email.		Name	Email	Govt.nz Digital Wallet ** (Y/N) NZ Verify (Y/N)
iOS* Must be linked to an Apple ID				
Android* Must be linked to a Google Account				

** A separate Non-Disclosure Agreement (NDA) may be required for private sector organisations that use the Govt.nz sandbox app, due to the potential visibility of other organisations' credential testing before they publicise their intent to offer digital credentials in the wallet.

Sandbox Participation Terms of Use

Disclaimer

These Terms of Use are issued as conditions of participation in the Government App Sandbox Environment. They are not intended to create a legally binding contract, but organisations and their suppliers must comply with them to maintain access. The provider reserves the right to suspend or revoke access at its discretion if these conditions are not met.

1. Purpose of Access

- The Sandbox is for testing, development, and familiarisation only.
- Participation does not constitute or guarantee accreditation, approval, or acceptance into production.

2. Test Data and Keys

- No real or production data, including any personal information (PII), may be entered into or processed in the Sandbox without the prior consent of the relevant data subjects.
- Test data must be anonymised, fictitious, and clearly identifiable as test in nature, unless required to use actual data in end-to-end testing of a process that must involve a real identity.
- Only non-production keys, credentials, and tokens may be used within the Sandbox. Production credentials must never be introduced.
- Any credential listed within the Sandbox may be visible to other participants accessing the environment.

3. Confidentiality and Public Exposure

- Participants must not publicly share, publish, or otherwise expose screenshots, recordings, logs, or descriptions of the Sandbox without prior written consent.
- Sandbox outputs must not be represented as final, production-grade, or government-approved functionality.

4. Monitoring and Logging

- The Sandbox is subject to full debug logging, which may capture detailed technical request and response payloads.
- By participating, you consent to such monitoring and acknowledge that the environment is not optimised for data minimisation.

5. Security of Credentials

- Credentials, access keys, or tokens issued for Sandbox participation are confidential and must be safeguarded.
- Participants are responsible for preventing misuse, sharing, or unauthorised disclosure of issued credentials.

6. Standards and Conformance

- Participants in the Sandbox are expected to design, test, and validate against relevant digital identity and interoperability standards (e.g. ISO, OIDC/OID4VCI, accessibility and security requirements).
- Evidence of conformance may be requested as part of our ongoing engagement process.

7. Issue Reporting

- Participants are expected to report defects, anomalies, or security concerns identified.
- Cooperation in resolving issues may be considered as part of accreditation readiness.

8. No Service Guarantees

- The Sandbox is provided on an “as is” and “as available” basis.
- Availability, reliability, or feature parity with production is not guaranteed and may change without notice.

9. Termination of Access

- Access may be suspended or revoked at any time, without notice, in the event of suspected misuse, breach of these terms, or at the discretion of the provider.

Acceptance Statement

This statement must be signed by the Business Owner named in the first section of the form.

- ☐ I confirm that I have read and understood the Sandbox Participation Terms of Use.
- ☐ I confirm that and that the Terms of Use will be provided to any third-party suppliers that will operate in the Sandbox on behalf of my organisation.
- ☐ I acknowledge that access to the Sandbox is provided on the conditions set out in the Terms of Use, and that access may be suspended or revoked at any time at the discretion of the provider.
- ☐ I confirm that production data, production credentials, or personal information (PII) will not be introduced into the Sandbox.
- ☐ I agree that all credentials and access keys issued to my organisation and its suppliers will be safeguarded.
- ☐ I understand that any credentials listed in the Sandbox may be visible to other participants.

Credential information

This information will be loaded into the Govt.nz App to allow credentials to be Issued into the wallet. If the organisation intends to provide multiple separate credentials, additional copies of this page can be submitted.

The credential IACA can be added into the sandbox Trust Framework Register VICAL while the related service is going through the DISTF accreditation process. It may also be added to the sandbox NZ Verify app if the credential is relevant to any of the verification use cases in the app.

The Technical Contact should ensure that the credential meets the requirements found in *Appendix A: OID4VCI Implementation Profile*. See *Appendix C* for an example of each field.

Required fields *

Details	Response
Issuer name* To be displayed in the app	
Issuance platform URL If not using the GCDO Issuance Platform, specific the tenant URL of your issuance platform	
Credential aligns to the OID4VCI implementation profile? *	☐ Yes <i>(See Appendix A for the OID4VCI Implementation Profile)</i>
Attached card artwork? *	☐ Yes (.SVG format - See Appendix B for design guidelines)
Card colour HEX code*	#000000 <i>(See Appendix B for design guidelines)</i>
IACA PEM String* If not using the GCDO Issuance Platform, provide the text of your .pem certificate file here and/or provide as a separate attachment,	-----BEGIN CERTIFICATE----- -----END CERTIFICATE-----
Credential listing (Optional)	If you support OID4VCI Authorization Code workflow and wish your credential to be listed in the app, please supply details in the following fields.
Credential title To be displayed in the list of credentials that may use Authorization Code workflow in the app wallet	
Credential offer URL This may be provided later if the URL is not finalised at the time of submitting the credential information.	openid-credential-offer://?credential_offer=

Credential category The section that a credential using Authorization Code workflow will be displayed in within the app wallet	☐ Licences and ID ☐ Certificates and fees ☐ Cards and checks ☐ Banking and finance ☐ Other – (Please state):	
Credential claims	Add rows as required	
Namespace (ISO Standard) * e.g. org.iso.18013.5.1	Identifier* e.g. first_name	Display name* e.g. First name

Appendix A - OID4VCI Implementation Profile

Credential Issuer Metadata

The credential issuer metadata fields:

- `issuer`: **Required.** The issuer's identifier. **MUST** be a URL using the HTTPS scheme.
- `authorization\_endpoint`: **Required.**
- `token\_endpoint`: **Required.**
- `credential\_configurations\_supported`: **Required.** Array of JSON objects containing the metadata of the offered credentials.

Supported Credential Configurations Metadata

The `credential\_configurations\_supported` credentials metadata fields:

- `format`: **Required. MUST** be `mso\_mdoc`.
- `doctype`: **Required.** String identifying the credential.
- `scope`: **Required.** String being used in the authorization request.

Authorisation Flow Support

- Authorisation code flow
- Pre-authorised code flow

Authorisation Request Parameters

When using authorisation code flow, wallets **MUST** implement PKCE (RFC 7636).

Authorisation request parameters:

- `client\_id`: **Required.** **MUST** be a unique string that identifies the wallet and **MUST** be registered with MATTR VII.

- ``redirect_uri``: **Required**. *MUST be either a HTTPS URL or a string identifier using the reverse-domain format. It MUST be registered in with MATTR VII together with the ``client_id``. Multiple redirect URIs can be registered for a single ``client_id``.*
- ``scope``: **Required**. *MUST refer to the ``scope`` of the credential being issued.*
- ``response_type``: **Required**. *MUST be ``code``.*
- ``code_challenge``: **Required**. *The PKCE code challenge.*
- ``code_challenge_method``: **Required**. *MUST be ``S256``.*

Token Request

Authorization Code Flow

Token request parameters:

- ``grant_type``: **Required**. *MUST be ``authorization_code``.*
- ``code``: **Required**. *The authorization code received from the authorization request.*
- ``code_verifier``: **Required**. *The PKCE code verifier.*
- ``client_id``: **Required**. *MUST be equal to the client ID used in the authorization request.*
- ``redirect_uri``: **Required**. *MUST be equal to the ``redirect_uri`` used in the authorization request.*

Pre-authorized Code Flow

Token request parameters:

- ``grant_type``: **Required**. *MUST be ``urn:ietf:params:oauth:grant-type:pre-authorized_code``.*
- ``pre-authorized_code``: **Required**. *The ``code`` received when creating the pre-authorized credential offer.*
- ``tx_code``: *Optional. The transaction code. MUST be present if a ``tx_code`` was used in the credential offer.*

Credential Request and Response

Credential Request Format Support

- The credential format MUST be ``mso_md doc``.

Proof of Possession

- The credential request **MUST** include a ``proof`` object.
- The ``proof`` object **MUST** include a ``proof_type``. The ``proof_type`` MUST be ``jwt``.
- The ``alg`` claim in the proof JWT header must be ``ES256``.
- The proof JWT must provide the public key in the ``jwk`` claim in the JWT header.

- The proof JWT `iss` claim **MUST** be the `client\_id` when using authorization code flow. The `iss` MUST be omitted when using pre-authorized code flow.
- The proof JWT `aud` claim **MUST** be equal to the `credential\_issuer` value in the credential issuer metadata.

Appendix B – Credential Artwork Guidelines

DIA Card Artwork Guidelines

Step 1
Pick a base colour (any colour)

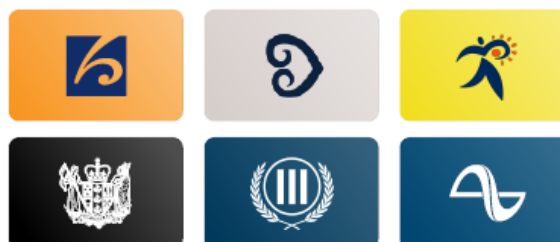

Step 2
Choose the simplest representation of your brand/organisation

The Simpler, the better. Think favicon or social media icon. Provide in SVG format (preferred) or 2000x2000px transparent PNG

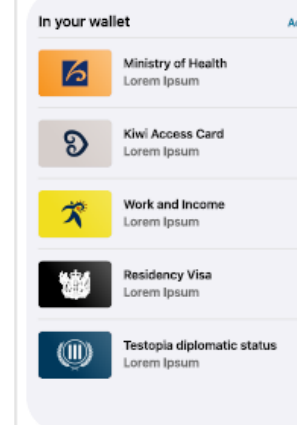

TIP: YOUR NAME WILL BE DISPLAYED ALONGSIDE THIS CARD, SO THERE'S NO NEED TO INCLUDE IT HERE.

Step 3
We'll combine chosen colour and brand mark, and add a subtle white gradient to create depth

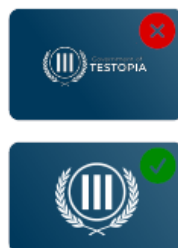

That's it!
We'll display your artwork in the wallet once added by a user

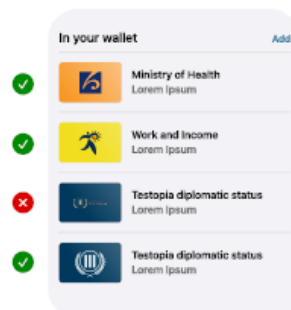

Tip 1
Keep it simple

Avoid using large, full logos. Only opt for the full logo if it can be resized effectively.

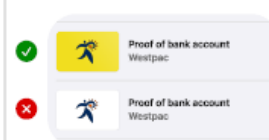

Full logos will be hard to read when it scales down

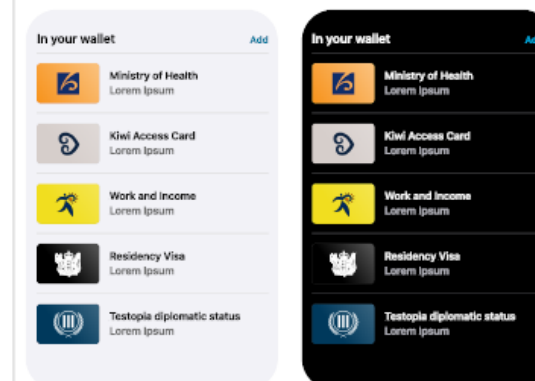

Tip 2
Colour is king

Cards and brands will stand out more vividly against color backgrounds than on white, enhancing the visibility of credentials.

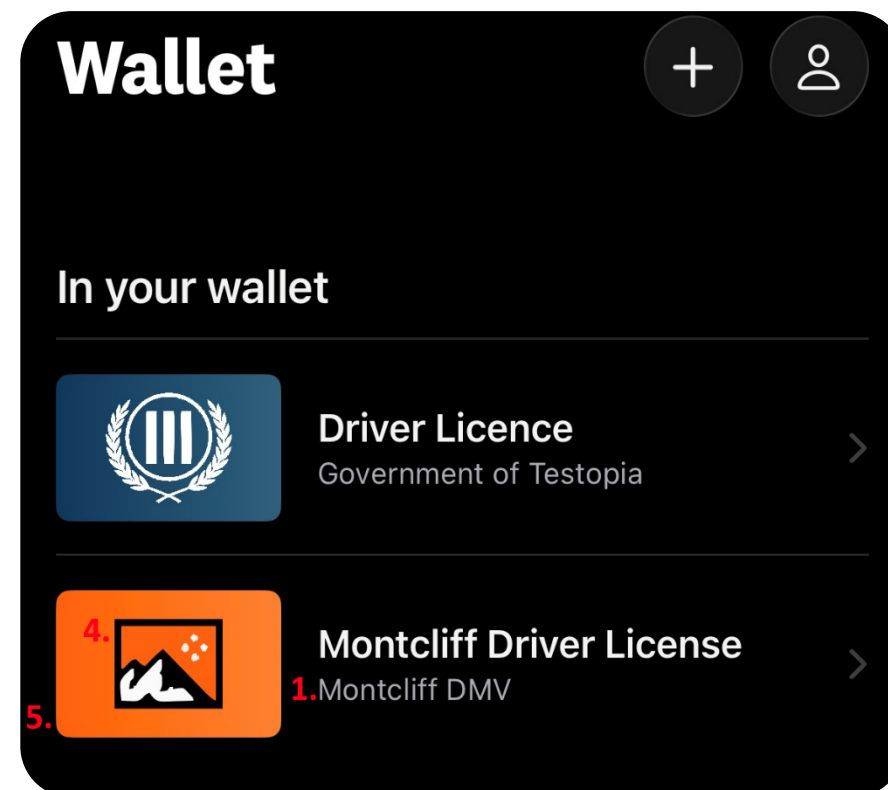

TIP: THINK OF THIS AS A REAL PHYSICAL CARD. WOULD A WHITE VERSION FIT YOUR BRAND?

FYI
Lights on or off? Don't worry, we'll use the same artwork on dark mode for brand consistency

Appendix C – Example fields and App display
